

Company Profile

Who We Are

Black Mountain Technologies is an artificial intelligence software company out of British Columbia. We build AI technologies for appointment-based clinics to retain and reactivate clients, and to recover the revenue they quietly lose through missed calls and patients who drift away. Everything is fully managed by us, in-house. Nothing is outsourced, and we keep none of your information.

What We Do

- Patient Reactivation

We text your dormant patient list back into the chair, in your clinic's name. Booked straight into your calendar. \$1,500 one-time, no monthly.

- Missed-Call Text-Back

The moment a call is missed, the caller gets an instant text from you and books, instead of calling the next clinic. Runs 24/7. \$1,500 setup + \$250/month.

Both services together: \$2,500 (reactivation one-time + missed-call \$250/month).

Full privacy policies and terms are available on our website at blackmountaintech.ca.
